Program 10:

Create a package CIE which has two classes- Student and Internals. The class Personal has members like usn, name, sem. The class internals has an array that stores the internal marks scored in five courses of the current semester of the student. Create another package SEE which has the class External which is a derived class of Student. This class has an array that stores the SEE marks scored in five courses of the current semester of the student. Import the two packages in a file that declares the final marks of n students in all five courses.

```java
package cie;
public class Internals {

        public int internal[]=new int[5];
}
```

```java
package cie;
public class Student {
        public String name;
        public int usn;
        public int sem;
}
```

```java
package see;
import cie.Internals;
public class External extends Internals {
        public int external[]=new int[5];
}
```

```java
import java.util.Scanner;
import cie.Student;
import see.External;
public class Marks {
```

```java
public static void main(String[] args) {
    int n;
    Scanner sc=new Scanner(System.in);
    System.out.println("enter number of students");
    n=sc.nextInt();
    External student[]=new External[n];
    Student details[]=new Student[n];
    int final_marks[][]=new int[n][5];
    for(int i=0;i<n;i++)
    {
        student[i]=new External();
        details[i]=new Student();
        System.out.println("Enter Student  usn and sem respectively");
        details[i].usn=sc.nextInt();
        details[i].sem=sc.nextInt();
        System.out.println("Enter Internal marks of 5 subject in respective order");

        for(int j=0;j<5;j++)
        {

            student[i].internal[j]=sc.nextInt();
        }
        System.out.println("Enter external marks of 5 subject in respective order");

        for(int k=0;k<5;k++)
        {

            student[i].external[k]=sc.nextInt();
        }
    }
```

```java
for(int i=0;i<n;i++)
{
        for(int j=0;j<5;j++)
        final_marks[i][j]=student[i].internal[j]+(int)(student[i].external[j]/2);
}
for(int i=0;i<n;i++)
{
        //System.out.println("Name: "+details[i].name);
        System.out.println("USN: "+details[i].usn);
        System.out.println("Sem: "+details[i].sem);
        System.out.println("Marks of the student is");
        for(int j=0;j<5;j++)
        {
                System.out.println(final_marks[i][j]);
        }
}
}
}
```

OUTPUT:

```
enter number of students
2
Enter Student usn and sem respectively
220 3
Enter Internal marks of 5 subject in respective order
34
33
32
28
40
